

PROJECTS

International

Hamad International Airport Qatar Doha

HUB worked closely with LDP to develop a series of unique lighting poles for the main access thoroughfare to the Hamad International Airport, Ras Abu Abboud Road. The client wanted a strong and unique visual element to feature along the main approach of this world class development. The arabesque patterning of the cladding of these 28m high mast poles is back lit with colour changing RGB LEDs to create a dramatic, and memorable night time experience for visitors arriving or departing Doha. HUB has also designed a complementary set of street light poles, flag poles and a series of street furniture elements for use throughout the Hamad International Airport.
